# SAMICK CARBON TECHNOLOGY

SAMICK is recognized for excellence in archery system for over 45 years of limb technology and over 25 years of aluminum technology. SAMICK technicians design, develop, and produce quality products by applying carbon technology at SAMICK headquarter located in South Korea. SAMICK's carbon technology is proven by world archers. SAMICK production processes are controlled to produce good products by balancing all the technologies into our bows to bring you the best performance. For exclusive archery experience, SAMICK maximizes technical resources and knowledge to produce best quality products.

Choose quality, choose SAMICK.

**SAMICK  
LIMBS**

A close-up, black and white photograph of a hockey stick blade. The blade is the central focus, angled from the top left towards the bottom right. The word "SAMICK" is printed in large, bold, black letters with a white outline on the blade's surface. Above the letters, there is a red logo consisting of a stylized 'S' and 'M' intertwined. The background is blurred, showing the textured surface of an ice rink and the metal parts of the stick's shaft and holder. The lighting is dramatic, highlighting the texture of the blade and the sharp edges of the letters.
